The wards do not reflect geographical areas only per capita. This disenfranchises the very rural areas as the Council is over represented by urban representatives. What ever formula used it should include an element of area. In addition, there needs to be a halving of the number of Wards to make the Council more efficient and less costly. I suggest this could be achieved by 2 persons to count as one in urban areas so lessening the numbers and increasing the percentage of rural representation. It has to be remembered that Westmorland Furness is predominately rural.
